4 Novembre 2021

### Sea state and wind field retrieval from active microwave instruments at ISMAR Napoli

Giuseppe Grieco

ISMAR-Napoli

Breve riassunto

Sea state and wind field are key geophysical parameters for both scientific and civil applications. For example, weather forecasters are interested in them, as well as people interested in deploying new sustainable sources of energy such as wind plants. Even people who simply want to enjoy their holidays may be. This seminar will give some highlights about the remote sensing activities relating to these parameters carried out by Giuseppe Grieco at ISMAR.
