OCEANOGRAPHY UNVEILED SUMMER SCHOOL

Join us for a week of immersive learning, collaboration, and exploration
in the beautiful setting of Venice

10' public transportation
from S. Marco

Residence for students

Conference
and Lecture Rooms

Bar-Café

The main objective of this summer school is to empower participants with the essential skills and knowledge required for crafting scientific proposals. During the initial three days, our emphasis will be on delving into key subjects through detailed lectures conducted by distinguished experts. Through these sessions, participants will enhance their comprehension of challenges related to the ocean. The primary emphasis of this program is to cultivate a learning atmosphere that underscores the process of formulating a scientific proposal. Throughout the duration of the school, participants will engage in active discussions, glean valuable insights from esteemed lecturers, and collectively identify unresolved issues within critical oceanic topics

ocean dynamics
mesoscale
global ocean observing systems
general ocean circulation
global ocean modeling
regional ocean modeling
ocean mixing

Lectures will be conducted by distinguished experts in marine science (L. Talley, T. Tanhua, J. Wilkin, G. Sannino, A. Griffa, A. Naveira-Garabato and others)

Who can apply? The school will be primarily targeting young scientists such as research master students, graduate students and first years postdocs
